 Ramapuram

## EDUCATION

### BSC ELECTRONICS

MAC RAMAPURAM  
(2019 - 2022)

### HIGHER SECONDARY

SSHSS VAZHITHALA  
(2017 - 2019)

### HIGH SCHOOL

INFANT JESUS EMHS KKLM  
(2007 - 2017)

## SKILLS

- HTML
- CSS
- JAVASCRIPT
- REACT
- PHP
- NODE
- FIGMA
- GITHUB

## LANGUAGE

- English
- Malayalam

## EXPERIENCE

CoinoneGlobalSolutions(2023- present)

## PROFILE

I am a Full Stack Developer with 1.5 years of experience in creating dynamic and responsive web applications. I have worked with PHP, React, and Node.js, gaining hands-on experience in both frontend and backend development. I'm passionate about building clean, user-friendly interfaces and delivering efficient,scalable solutions.

## PROJECTS

### WOODSBERG

- It is Built with Codelgniter Developed a multi-channel e-commerce platform with three portals: Retail, Wholesale, and Export, focused on home and decoration products Designed and implemented backend modules
- Product & Category management
- Coupon code system for discounts
- User & Dealer management with role-based access
- Integrated secure payment gateway (Paynimo / Worldline) with encryption and request validation
- Captured order & payment details
- Auto-generated order confirmation and sent itemized invoices via email
- Built inventory & stock management with search, add, edit, and remove functionality.

Link : <http://woodsberg.com>

### Visitor Management Application

- Built with PHP (Codelgniter MVC Framework) Developed a web-based visitor tracking and communication system for offices and institutions to streamline reception and security workflows.
- Designed a visitor registration form where guests can submit details such as name, contact, and purpose of visit.
- Visitors → Submit details online before/during entry
- Admin/Receptionist → View visitor details, monitor check-ins, manage approvals
- Concerned staff (CEO/HR/Owner) → Receive notifications/updates about visitor requests
- Designed a centralized dashboard with visitor logs, search, and history for security and compliance tracking.

## ERP Application (Internal Project)

- It is Built By using React js and Node js with basic application
- Built a responsive and interactive UI for medicine management using React components.
- Auto-populates associated address when a medicine is selected.
- Automatically calculates total price when rate and quantity are entered.
- Provided a list view with CRUD operations (Add, Delete, Clear medicines).
- Added real-time filtering/search by medicine name and date for quick access.
- Stored medicine details, stock levels, and transaction history.
- Enabled efficient queries for filtering by name, date, and stock availability.
- Achieved seamless frontend-backend communication via Axios/fetch calls.

## Top in Town

- It is Built with CodeIgniter Developed a e-commerce platform with focused in Wholesale,, focused on Grocery products Designed and implemented backend modules
- Product & Category management
- User & Dealer management with role-based access
- Auto-generated order confirmation and sent itemized invoices via email
- Built inventory & stock management with search, add, edit, and remove functionality.
- Worked with phpMyAdmin (MySQL) for database design (products, users, orders, coupons, dealers).

## Imelt Extrusion

- It is Built with CodeIgniter Designed and developed a company website for an extrusion business specializing in metal rods and extrusion products.
- Implemented a dynamic gallery module allowing admins to upload, manage, and showcase product images
- Built a backend dashboard for product and gallery management with CRUD functionality (add, edit, delete images).
- Created a product catalog highlighting different types of extrusion rods and their specifications.
- Used secure file upload handling to manage and validate image formats for the gallery.
- Followed MVC architecture (CodeIgniter) for scalability and clean separation of logic.

## Amazing Fresh

- It is Built with CodeIgniter Developed a full-featured e-commerce platform for selling fresh fruits and vegetables online.
- Designed a user-friendly frontend with product catalog, categories, and search functionality.
- Integrated secure payment gateway for seamless online transactions.
- Created an admin dashboard with modules for:
- Product & Category management
- Inventory control (add, edit, delete stock items)
- Enabled order confirmation via email with detailed itemized bills.
- Built with responsive UI (Bootstrap/HTML5/CSS3) to ensure accessibility across devices.
- Followed MVC architecture (CodeIgniter) for maintainability and scalability.
